

Electrical Engineer Internship

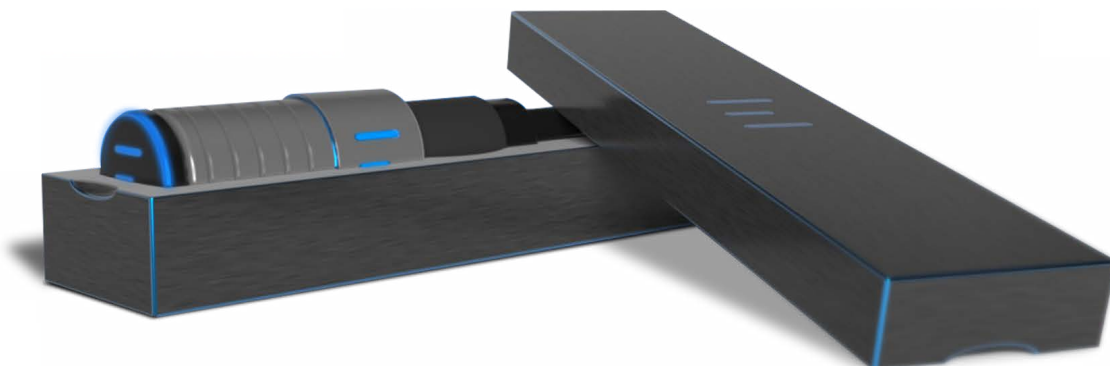

ETHER Electronics is an audio electronics company whose focus is to bridge the gap between pro-audio hardware and consumer electronics. This project will include the exploration of wireless technology (i.e. Bluetooth).

We're seeking a passionate 3rd or 4th year electrical engineer to help us develop the electrical design and components for our product.

Because we are a startup company, we will go into more detail regarding the electrical development needed upon the first meeting.

This is an internship position with the ability to grow with the company.
