UCLA EE Fast Track Program Biography

Having graduated from Homestead High School in Cupertino California in the summer of 2015, I am currently enrolled in UCLA's Electrical Engineering program. I developed an interest in electrical engineering through my hobby of building and upgrading my personal computer, as well as having several relatives majoring in EE. I was also an officer in my high school's Electronics Club, where I decided on projects and worked on consumer electronics such as drones and soldering kits.

After I obtain my bachelor's degree in electrical engineering, I plan on obtaining a master's degree before seeking employment. I want to be the owner of my own company when I grow up, focusing in durable and upgradeable consumer electronics. In the mean-time, I will seek initial experience in the professional field through laboratory work during the summer breaks of my undergraduate years.
