

Hiiiiii I'm Andrew. I'm from Canada and I love running and I also am an amateur competitor in Pokemon tournaments (VGC). I practice online but for major tournaments, I fly around Canada/UK to compete. Probably my favorite part of Pokemon is the strategic planning: analyzing matchups, metagame trends, specific Pokemon interactions and team strategies. So far I've won 8000-ish \$ USD. I chose ECE at UCLA mainly because LA raves go hella hard and I didn't want to live in New Jersey/Cambridge for college (I'm kinda sick of the cold) and also because I got in state tuition for UCLA. The research internship as part of Fast Track was also super nice to get some early hands on experience with industry and I'm lowkey really excited about that. I love hands-on projects with like Arduinos and just like soldering pieces together. In the future though I wanna do something related to healthcare, maybe bioengineering + ee or something like medical sensors or maybe even computational biology. However, I really haven't explored a lot within EE and so this will probably change as my interests grow. Or maybe not.
