

Hi everyone! I'm Andrew Shieh, a first year Electrical and Computer Engineering major at UCLA. I'm originally from Palo Alto, CA (woo NorCal) so it's exciting to continue my education here in sunny Southern California. I went to Palo Alto High School, where I was a part of the varsity tennis team.

My interest in pursuing an education in electrical engineering first started in high school, where I developed a passion for physics and math through my classes. I was then able to take these concepts I learned in my classes to real-life engineering projects that I created for my school's Science Olympiad team, such as a controllable robotic arm and an electric vehicle. Working on these projects gave me hands-on engineering experience and a greater appreciation for the numerous applications of electrical engineering.

I'm excited to be a part of the Fast Track program where I hope to expand my engineering knowledge. I plan on taking advantage of my time here by eating good food at the dining halls, joining engineering clubs and taking fun classes!
