

Andrew Tian

About Me

Hello! My name is Andrew Tian, and I'm studying computer engineering at UCLA. I've lived in San Diego for most of my life, where I attended Canyon Crest Academy. I love hiking, soccer, pickleball, going to the gym, cooking, listening to music, and pretty much any kind of physical/outdoorsy activity.

Why ECE

I've been interested in math and physics since I was a child, so I always knew I would end up pursuing a career in STEM. I learned more about computers through my dad, an electrical engineer. He would often tell me about his work, which inspired my interests in problem solving and engineering.

Why UCLA

I chose UCLA because of its location and "work hard play hard" culture. UCLA has a strong focus on academics and research, which was a must for me. However, unlike other universities, UCLA is also incredibly fun and social, with something to do for everyone. This rare combination greatly appealed to me and ultimately convinced me to choose UCLA over other options.

Career Goals

I haven't fully explored all that computer engineering has to offer yet, so I'm still unsure of what I want to pursue in the future. However, I'm currently interested in learning more about either computer graphics or hardware design, and I can see myself pursuing a career in either field in the future.
