

Hi, my name is Andrew Wilhelm and I'm majoring in electrical engineering at UCLA. I'm originally from San Diego and come from a family of engineers (everyone in my immediate family except for my mother is either an engineer or getting an engineering degree!). My favorite thing about engineering is the applications. I love working on interesting projects. A couple summers ago I worked as an intern at a startup that builds drones. Specifically, I worked on the software side where I developed the on-board artificial intelligence to identify cars and trees from a live video feed. As a freshman, I took on a research position with the Interconnected & Integrated Bioelectronics Lab where I develop embedded systems to be used in biomedical sensors. Additionally, I joined IEEE where I built a remote-controlled quadcopter. I've also done side projects in artificial intelligence, Android app development, and web development. I'm always looking for a cool new project to do where I can apply what I've learned from my academics.
