

Hello! My name is Steve Lee, and I am a computer engineering major. I've been born and raised in the Los Angeles area for all my life, attending high school at West Ranch High School in Santa Clarita.

For as long as I can remember, I've always had access to a computer and have been fascinated by the endless possibilities of programming. I find it very satisfying to encounter challenging problems and eventually see the results I desire in the end. It was for this reason that I got into competitive programming and led the coding olympiad team at my high school. Additionally, I continued to tutor students in math and computer science so that I can offer them the same opportunities that I was fortunate to receive myself.

Outside of academics, some of my interests include writing sheet music, playing video games, and developing video games – that is why I've joined ACM Studio, where I can meet aspiring developers of many different fields and backgrounds and work on projects together.

I selected computer engineering as my major because I am interested in both the software and hardware aspects of computers. Through these courses, I hope that I can expand my knowledge and see what kind of future would interest me more.
