

## Fast Track Class of 2022 - Hyounjun Chang

\_\_\_\_\_Hello, my name is Hyounjun Chang, and I am from San Diego, California. I lived in South Korea for my first nine years, and lived in San Diego ever since. I am fluent in Korean and am the first engineer in my family. I chose UCLA for its proximity to my hometown and its lively campus environment!

My high school lacked the opportunity to explore the area of engineering. In fact, not just engineering, but pretty much any club activity. In high school, I was more of occasional mathematician, joining competition math, and looking at logical process behind solving each problem. As I learned to program and make my first projects, it became apparent to me that I wanted to become an engineer. Both hardware projects and software projects, despite requiring breakthroughs, intrigued me.

One reason I chose electrical engineering over any other engineering is due to its wide scope; there are many branches to specialize on, and I would have the ability to choose which field to work in. As I learn more about Electrical Engineering, I hope to find more about the future of engineering and my possibilities in this field.
