

Jameson Zhang

Hello, my name is Jameson Zhang and like everyone else here, I am studying Electrical Engineering at UCLA. I was born in Dallas, Texas and moved to San Jose, California when I was four years old. There, I went to high school at Lynbrook High School. I believe that ever since I was a child, I knew in the back of my head that I would be an electrical engineer. Both of my parents are electrical engineers and they would always tell me how being an engineer runs in my blood. As a child, I would be fascinated by dad's chips and design drawings, even though I had no idea what I was looking at (but that's what I'm here to learn). Electrical engineering aside, he would also let me tag along as he built computers, fixed appliances, and much more, developing an early interest in technology and engineering.

When I went to high school, I began pushing myself in the STEM direction. My freshman year, I decided to study math and physics on my own and through extra classes I asked my mother to enroll me in, in order to accelerate my learning and explore new sciences. I quickly developed a strong interest in math and science, especially physics. These events also played an important role in convincing me to choose electrical engineering as my major.

As of now, I plan to get an early exposure actually engineering by taking Engineering 96, Electrical Engineering 1, and involving me in EE centered clubs such as IEEE. Outside of academics I enjoyed running track and field and joining marching band during high school.
