

I grew up in San Diego, and attended Scripps Ranch High School. I loved Southern California's atmosphere and weather, and seeing as UCLA was by far one of the best schools in the region, it quickly became a dream school for me.

Since both of my parents graduated as Electrical Engineers, I've been exposed to the world of engineering from a young age. Following this passion, I chose Electrical Engineering as my major, with the hopes that with my knowledge I can eventually contribute to pushing the frontier of scientific progress.

Arriving at UCLA, I've continued to expand the breadth of my engineering experience. I've joined IEEE, entering the C3 program, and have found the lectures and goals to build a project something that has not only continued to captivate my interest but also exposed me to the very diverse field of electrical engineering. In addition, despite being an engineer, I am fortunate to have had the opportunity to partake in student government by being accepted for an internship with the Undergraduate Student Association Council's Office of the President. Since I also passionate about law, the activities that UCLA has to offer me have been great in complementing my interests and have been overall wonderful and enlightening experiences for me.

After graduating for UCLA, I hope to enter law school, where I can study to become a patent lawyer. I've held this career goal since middle school, and to this day, I continue to remain determined in reaching my goal.

My free time mostly consists of me talking to friends, playing piano, or playing video games.
