

Hi, Welcome to my tape.

My name is Neha Adhlakha and I am a first-year Electrical Engineering major. I am from Northridge, CA, only 20 miles away from UCLA. I am a huge Netflix enthusiast, and I have been dancing since I was 6 years old.

I first realized my interest in STEM when I took an introductory CS course freshman year of high school. That led me to join my high school's robotics team (Robodox 599) and where I've formed bonds with my teammates, discovered my ambition for electrical engineering, and have matured as a leader. On this team I held multiple positions as Electrical Lead, Outreach Executive, and President my senior year. Robotics gave me lots of experience with wiring and electrical design as well as time management and collaboration. During high school, I took Exploring Computer Science, Computer Science Principles, and AP Computer Science A. All of these activities plus the work I did during the summer with NSLC Engineering and Girls Who Code led me to choose Electrical Engineering at UCLA.

This year, I plan to be an active member of Bruin Racing SMV and IEEE. I hope to further explore my interests in Electrical Engineering and I am looking forward to utilizing all the resources UCLA offers to aid me in my career path.
