

Hello! My name is Nikki Woo and I am a first year Electrical Engineering major at UCLA. I was born in Alhambra and grew up in Temple City, California. I graduated from Temple City High School in 2017. While in high school, I participated in the annual school musicals, including 42nd Street, The Music Man, and My Fair Lady, as well as in our school's color guard and ASB leadership. Outside of school, my interests including knitting, dancing, and listening to music. Though I have a great love for the arts, I have an even greater passion for STEM.

I knew I wanted to major in Electrical Engineering when I took AP Physics 1 in my junior year of high school. The logical processes that were required to construct and solve free body diagrams brought me an internal joy that no other subject had piqued. When we began covering circuits in our coursework, I developed an even greater happiness. My AP Physics teacher has been a driving force in encouraging my passion in the subject as he is always quick to offer his honest opinions and time in the development of my career. Thank you, Mr. Slattery!

I am ready for the challenging but rewarded next few years at UCLA. I plan to be an active member of IEEE as well as the Regent's Scholars Society. Outside of academics, I plan to continue to dance and be an active member of Dykstra's Resident Government Council as a Facilities Representative.
