

I've lived in LA County my entire life, and I went to Arcadia High School. I have many Bruins in my family. Two of my older sisters graduated from UCLA with Electrical Engineering degrees, and my uncles are also Bruins. When I visited UCLA at nine years old, UCLA instantly became my dream school.

I chose Electrical Engineering not only because I find math and physics the most rewarding classes but also because I sincerely believe that as an engineer, I can help make the world a better place.

I currently plan on one day working in software or in the biotechnology industry, although I may decide on a new career path as I proceed farther in my education. I'm a part of two programs within IEEE: OPS and Advanced Projects. In the OPS program we work on independent circuit projects and learn to solder, and in Advanced Projects we will program and build a quadcopter by the end of the year.
