

Willson Luo

Hello, my name is Willson, and I am currently studying electrical engineering at UCLA. I'm from Arcadia, California, where I attended Arcadia High School. Outside of school, I enjoy tennis (I'm always looking for new hitting partners so feel free to hit me up), climbing, skiing, playing guitar, and trying new restaurants.

Growing up, I always knew I wanted to become an engineer since I enjoyed building things. My interest only focused towards electrical engineering after I built my PC and realized how big of an impact electronics had on my everyday life and contributed to everything I enjoyed. Also, it's still insanely cool to me how we can make transistors literally smaller than viruses. Throughout high school, I led my school's engineering team where we built a solar powered boat, deepening my interest in electronics and engineering.

I hope to pursue a career in circuit design, currently leaning towards the areas of analog and photonics integrated circuits. However, this very likely might change as I still discover all that electrical engineering has to offer. I plan to go to grad school and work in design roles at chip companies, or start my own startup if the right idea ever hits me.
