

Amanda Wang

Hometown: Morgantown, West Virginia

High School: Morgantown High School

Interests: machine learning, environment, app development, hiking

Why did you choose UCLA ECE?

I chose UCLA because I loved the location, as well as the positive energy from all the students that I met! UCLA has such an amazing history, being the birthplace of the internet, so it was an obvious choice for me.

How are you involved at UCLA?

At UCLA I am part of IEEE as a member of the Micromouse project. In addition, I work in Prof. CJ Kim's research group helping to develop a graphical user interface for programming EWOD devices with React.js.

Personal Projects

I'm currently learning how to build my own website through GitHub pages (it is very much still in the works). Additionally, I am learning pytorch!

Educational and career plans

I will be a Meta University intern this summer, and I hope to explore more software engineering! In college, I'd like to become more involved with research so that I will be able to explore new topics more in-depth, particularly in the field of natural language processing. Furthermore, I hope to work on the connection between hardware and software at some point, since the interface between the machine and what people see is very interesting to me.
