
Steve Lee

UCLA Fast Track

Class of 2025

Hometown: Santa Clarita, CA

High School: West Ranch High School

Why did you choose UCLA ECE?

I selected computer engineering as my major because I am interested in both the software and hardware aspects of computers. I have always been fascinated by the potential of computer programming and electronics, and I believe that UCLA's ECE program can provide the best opportunities for further exploring these fields.

How are you involved at UCLA?

I am currently a member of ACM Studio, which is dedicated to fostering a community of individuals interested in developing video games. As such, I've joined a smaller group in working on our own video game!

What are your educational and career goals?

I plan to complete my current B.S. degree in Computer Engineering and hopefully apply for a graduate program in a related field. I also hope that, along the way, I can partake in various research and internship opportunities to gain a better understanding of which specialty areas I would be most interested in making part of my career. At the moment, I am more interested in further exploring CPU design or integrated circuit design.

What projects are you taking on in your own time?

In addition to the game I'm helping to develop in ACM Studio, I am also working on designing my own video games solo. For this reason, I have been expanding out into other hobbies such as music composition and narrative writing.
